Subject: Business Plan and Proposal

SmakTis Consultancy

Executive Summary

This business plan presents the establishment of an educational support and life science research consultancy company led by Jacob Olaleye Onireti (PhD), a scientist with solid academic and research expertise in biochemistry, molecular diagnostics and drug discovery. The company will provide educational support services (including private tutoring, substitute teaching services, academic writing, project management and teaching support services in biochemistry and molecular biology), research consultancy services (these include; lab-based consultation/assistantship with wet lab experiments and data analysis, support with proposal preparation, scientific/manuscript writing, and support Biotech startups in R&D service, scientific literature review, data interpretation and elucidation of biomolecular data and drug signalling pathway/ mechanism of action (MoA)).

Company name: SmakTis

Legal form: Sole Proprietorship

Mission: To help students, professional researchers, and organizations achieve their academic and research goals through reliable, high-quality, and ethical support services.

Vision: To become a trusted partner for schools, universities, researchers, and biotech start-ups in Sweden, recognized for delivering professional and tailored academic and research solutions.

The company will cater to:

- 1. High Schools (particularly Internationella Engelska Skolan)** that need substitute teachers' service in subject areas with a critical teacher shortage (precisely in the sciences: Chemistry, Physics, and Mathematics)
- 2. University students:** Master's and PhD students who need assistance with research, data analysis, proofreading, or scientific writing/review.
- 3. Researchers and academics:** Professionals who need help in preparing publications, grant applications, or conducting systematic literature reviews, or who need research assistantship support with wet lab experiments and data analysis.
- 4. Biotech R&D/Startups:** Companies requiring research reports, supporting the R&D projects with literature review, data analysis, and interpretation/elucidation of molecular mechanisms.

The target is to serve 15–25 consistent customers per month within the first year, with potential for scaling through repeat business, word-of-mouth, and institutional partnerships. The assignments will be secured through a multi-channel strategy:

- 1. Leveraging on the existing network:** Leverage on the existing network with previous place of work (postdoc, research team, formal labs) and the existing network in the biotech startups network
- 2. Networking with high school universities:** Establish relationships (Internationella Engelska Skolan (IES), faculty members and student associations in Stockholm, Uppsala, Gothenburg, and Lund, offering workshops and free seminars to showcase expertise.

3. Professional social media marketing: Leverage LinkedIn, ResearchGate, and Twitter to attract researchers seeking support. Facebook and Instagram will be used to engage students.

4. Website with SEO optimization: Create a professional website showcasing services, testimonials, and contact details.

5. Word-of-mouth referrals: Delivering quality results will encourage referrals from satisfied clients.

6. Direct outreach: Contact research labs, companies, and institutions to offer consultancy or support packages.

Customer projection and expected growth

- Year 1: Begin with 15–20 customers per month, focusing on small- to medium-sized assignments.
- Year 2: Expand to 30–40 customers per month by forming partnerships with at least two research groups or biotech companies.
- Year 3: Scale operations by hiring part-time staff or collaborators to handle growing demand.

Agreements with customers

The business will operate on both formal and informal agreements, depending on the client type. Individual clients, corporate clients, and long-term service agreements may be established for clients requiring monthly support (e.g., regular data analysis or tutoring).

Cost responsibility and materials

1. The company model is lean, with minimal physical inventory required and managed costs, as follows: a co-working space in Stockholm will be utilized, providing flexibility, internet access, meeting rooms, and networking opportunities.
2. The company will rely primarily on laptops, licensed software (such as GraphPad, EndNote, MS Office, etc), and digital storage.
3. For workshops or on-site meetings, travel expenses will be factored into contracts.
4. The company will register for F-skatt (business tax status) and ensure compliance with VAT when applicable.

Workspace strategy

Service operations will be based in Stockholm, using a co-working space as the physical hub. This choice provides:

- Professional meeting areas for client interactions.
- Networking with other start-ups and academics.
- Access to shared office resources. Additionally, utilizing social media platforms, such as LinkedIn, Facebook, and a company website, will serve as major digital workspaces for communication, marketing, and customer onboarding. This dual approach ensures visibility both locally and internationally.

Service delivery model

The company will operate under a project-based delivery model:

1. Client contacts the company through email, phone, or website.
 2. Initial consultation to define scope, deadlines, and pricing.
 3. Formal agreement signed (electronic or physical).
 4. Work conducted using secure digital tools; progress updates shared regularly.
 5. Delivery of final output with revision option.
 6. Feedback collected for continuous improvement.
- For institutional/research clients, recurring service models (retainer agreements) will be implemented to ensure steady cash flow.

Marketing and growth plan

The focus will remain on quality, promoting client satisfaction to create organic growth through repeat business and recommendations.

1. Phase 1 (Months 1–6): Establish online presence, secure at least 5–10 monthly clients, and build testimonials.
2. Phase 2 (Months 7–12): Expand into high schools and partnerships with research groups, run workshops, and grow monthly client base to 20–25.
3. Phase 3 (Year 2 and beyond): Launch advanced service packages (e.g., statistical analysis packages, research project management) and expand internationally.

Financial Plan

Revenue will be generated through service-based pricing, depending on project complexity:

- Tutoring/Substitute teaching service: 135–300 SEK per hour
- Literature review and data analysis support: 1,500–5,000 SEK per project
- Research assistantship, proposal/thesis support: 5,000–7,000 SEK per project
- Institutional training/workshops: 10,000–20,000 SEK per session
- The target is to generate 30,000–40,000 SEK per month in Year 1, growing to 100,000+ SEK per month by Year 3 with institutional partnerships.

Risk management

Potential risks include fluctuating demand, competition, and regulatory compliance. Mitigation strategies:

- Diversification: Provide both individual and institutional-based services to ensure balanced demand.
- Ethical compliance: Ensure strict adherence to academic integrity guidelines to avoid reputational risks.
- Continuous learning: Invest in upskilling to stay relevant with new research tools.
- Financial planning: Maintain savings buffer and reinvest profits wisely.

Conclusion

This company will succeed by combining professional academic and research support consultancy services with a customer centered approach. By leveraging my experience in academia and research and the use of co-working space in Stockholm, as well as maintaining a strong online presence, and forming agreements with individuals and institutions, the company will operate efficiently while scaling sustainably. With careful management of costs, clear agreements, and steady client acquisition strategies, the business is positioned to grow into a reliable partner in Sweden's educational and research ecosystem.
